

Adult Preventive Care

Purpose

To recommend clinical preventive medicine services for adult patients in the primary care setting for better health outcomes.

Key Message for Healthy Aging

Clinical preventive services are important tools for healthy aging that can lower health risks and prevent or delay the onset of disease. Fewer than twenty-five percent of adults aged 50 to 64 years are up to date on services. Fewer than 50% of adults aged 65 years or older are up-to-date with core preventive services despite regular checkups.
