

Building on the success of the Hypertension guideline project (2014-2017), MCMS is embarking on a second implementation project that will run from January 2018 through December 2019 involving Asthma Management for pediatric populations and Major Depressive Disorder for adult populations.

As a new ABMS Multi-Specialty Portfolio Program Sponsor, we will offer Maintenance of Certification Part IV credit to participating physicians in Performance/Quality Improvement projects initiated both by MCMS and external organizations seeking to offer improvement in medical practice credits to their board certified physician panels.

We are also able to offer Certified PAs free Category 1 PI-CME credit with NCCPA for participating in QI initiatives along with physician members of MCMS. Thanks to a collaborative agreement between NCCPA and the ABMS Multispecialty Portfolio Program – a program MCMS participates in – Certified PAs can receive this high-value CME credit for participating in patient safety and performance improvement activities to improve the quality of patient care.
